RSNA Defines the Future of Radiology

In this era of rapid technologic advancement, the possibilities for radiology are wide open. RSNA recognizes that the road to the future is paved by improved clinical practice, innovative research, and excellence in teaching — all of which demand quality continuing medical education. Through the development and implementation of education-oriented innovations, RSNA is dedicated to helping radiologists and allied health professionals improve their radiologic skills and knowledge.

Learning Resources for the 21st Century

Leaders in radiology depend on RSNA Educational Resources recorded live during RSNA's Annual Scientific Assembly. Developed in partnership with the most highly regarded experts in their fields, these instructional materials feature specific, practical information that progressive radiologists can use every day to enhance the level of diagnostic and/or therapeutic care they deliver.

Available for purchase or rental, these programs come in slide/audiocassette and video formats for convenient use in the home or office. Videos are available in NTSC (North American), PAL and SECAM television standards at no extra cost. A selection of syllabi and scientific exhibits is also available on CD-ROM. All materials are developed by using advanced computer enhancements that offer program users the greatest instructional impact possible.

At the forefront of quality educational programs, this collection includes more than 200 courses in eleven clinical categories in all imaging modalities. All of these materials can be found in the Learning Center Resources Catalog, updated each year to ensure that the materials are relevant to current and future directions of radiology. RSNA Learning Resources are available for both Category 1 and Category 2 CME credit.

Order RSNA Educational Resources by calling 800/272-2920 (toll free in the U.S. and Canada). Net revenues from the sale of these educational materials go the RSNA Research and Education Fund in support of research and education in all radiologic subspecialties.
